Developers x20 (JAVA M204 COBOL RESTFUL API / TYPESCRIPT)

Description

Developer ($880 per day):

Developers use their in-depth knowledge to provide technical advice and guidance to less experienced staff. Developers work under the support and general direction of senior staff. They exercise a degree of independent judgement and make decisions within defined parameters that require some reliance on skills and knowledge. Developers undertake their work in the context of competing priorities and contributes to changes in workplace practices and business improvement strategies.

Senior Developer ($1040 per day)

Senior Developers realise design, prototypes and testing support, and are responsible for the development of software and technical design. The role is responsible for the definition of software/technical design and realisation. Senior Developers work under the limited direction of senior staff. They exercise both initiative and judgement in the interpretation of policy and in the application of practices and procedures. Decision-making is substantially dependent on judgement, skills and knowledge. Senior Developers manage and organise their own work in the context of competing priorities, including contributing to business planning, changes in workplace practices and business improvement strategies.

Senior Development Expert ($1200 per day)

Development Experts engage in the design and the development of high-quality solutions in support of business and technical requirements. The role solves highly complex problems. Development Experts exercise a considerable degree of independence and undertake a technical leadership role, with work performed under the general guidance of senior staff.

Duties

Developer APS5

• Undertake a range of analysis, design, software development, prototyping, testing and maintenance activities under guidance from senior developers
• Draft technical documentation for review by senior staff
• Provide maintenance and support within the assigned area of responsibility
