

Senior Microsoft Power Apps Application

Description

Software Engineers have experience overseeing software development projects, writing optimised code, and provide technical leadership to a team of software engineers. They are responsible for the quality and functionality of the software produced by their team.

Responsibilities

The Power App Developer will be responsible for:

- Designing and developing Power Apps to support FWIN business processes
- Implementing Dataverse as the primary data store for FWIN records
- Designing and configuring Power Automate flows to support data validation, workflow automation, and notifications
- Migrating existing data from SharePoint Lists to Dataverse
- Ensuring data quality, integrity, and consistency throughout the migration process
- Applying appropriate security roles, permissions, and governance controls
- Collaborating with business users to refine requirements and iterate solutions
- Producing clear technical and operational documentation, including:
 - o Data model and solution design
 - o Application configuration
 - o Support and maintenance requirements
- Delivering user training, knowledge transfer, and hyper-care support following deployment

Experience developing Microsoft Power Apps canvas/model driven apps and Power Automate flows

- Consulting skills such as solution architecture design, and stakeholder management
- Experience implementing governance policies for applications and data within Dataverse
- Strong communication skills for collaborating across internal teams
- Ability to troubleshoot and optimise performance of complex workflows, application and data connections
- Foundational knowledge of Microsoft 365 Platform Base
